

# Water Management Policy

**vedanta**

At Copper Mines of Tasmania, we recognise the social, economic and environmental value of water.

Copper Mines of Tasmania strives to:

- Understand our water footprint
- Maintain a water balance that minimises the amount of fresh water consumed
- Comply with applicable national, state and local regulations
- Identify water conservation projects and promote reduction, recycling and reuse
- Avoid pollution of surface and ground water resources
- Treat all waste water to best practice standards before discharging to the environment
- Ensure that water / waste water storage facilities are designed, constructed and monitored in accordance with legislative requirements and best practice

We will monitor water quality and measure and report progress against this policy and review performance on a periodic basis to ensure ongoing management of water resources.
